The association between maternal fears about their infant/toddler during the COVID-19 pandemic and depression and anxiety: a birth cohort study – Foschiera RW et al.

Table S1 Univariate association between maternal fears and depression and anxiety trajectories

	Depression trajectories							Anxiety trajectories						
	Stable low		Non-clinical increase		Clinical increase		p-value†	Stable U shape		Moderate increase		Severe increase		p-value†
	N	%	N	%	N	%		N	%	N	%	N	%	
Fear that child would be infected with COVID-19 or get sick														
No	23	7.6	17	3.0	1	0.4	<0.001	37	5.6	4	1.0	0	0.0	<0.001
Yes	280	92.4	553	97.0	237	99.6		620	94.4	403	99.0	57	100.0	
Fear that the mother would contaminate her child														
No	47	15.5	37	6.5	4	1.7	<0.001	72	11.0	15	3.7	1	1.8	<0.001
Yes	256	84.5	532	93.5	233	98.3		583	89.0	391	96.3	56	98.2	
Worry about the pandemic's effects on the child's future														
No	55	18.3	41	7.3	6	2.5	<0.001	84	13.0	17	4.2	3	5.3	<0.001
Yes	246	81.7	519	92.7	230	97.5		564	87.0	383	95.8	54	94.7	

† p-value using Fisher exact test.
